Part 1: Basic Science and Physiology . . 1

1. Overview of the respiratory system	3
Overall structure and function	3
Basic concepts in respiration	4
Control of respiration.	7
Other functions of the respiratory system	8
2. Organization of the respiratory tract	9
The respiratory tract.	9
3. Pulmonary circulation	23
Introduction	23
Blood supply to the lungs.	23
Pulmonary blood flow	24
4. Physiology, ventilation and gas exchange	31
Introduction	31
Mechanics of breathing	32
Gaseous exchange in the lungs	44
5. Perfusion and gas transport	47
Overview	47
The ventilation–perfusion relationship	47
Gas transport in the blood	50
Acid–base balance	56
6. Control of respiratory function	61
Control of ventilation.	61
Coordinated responses of the respiratory system	64
Respiratory response to extreme environments.	67
7. Basic pharmacology	69
Overview	69
Bronchodilators	69
Glucocorticosteroids	71

Mucolytics.	72
Drugs used in smoking cessation	72
Drug delivery devices.	72

Part 2: Clinical Assessment 73

8. The respiratory patient – taking a history and exploring symptoms	75
Introduction	75
General steps	75
Breathlessness	75
Sputum	75
Haemoptysis.	76
Wheeze	76
Chest pain.	77
Other associated symptoms.	77
Past medical history	78
Patients with known respiratory disease.	78
9. Examination of the respiratory system	81
Introduction	81
General inspection	81
10. The respiratory patient: clinical investigations	91
Introduction	91
Routine investigations	91
More invasive procedures.	95
Histopathology	96
Investigations of pulmonary function	96
11. The respiratory patient: imaging investigations	103
Plain radiography	103
Pulmonary angiography	110
Ultrasound	112
Magnetic resonance imaging	112

Part 3: Respiratory Conditions . . . 113

12. Respiratory emergencies	115
Initial assessment.	115
Acute respiratory distress syndrome (ARDS).	116
Respiratory failure	117
Pneumothorax.	118
Tension pneumothorax.	119
Foreign-body aspiration	120
Pulmonary embolism	120
Acute asthma	122
Pulmonary oedema	122
Anaphylaxis	124
Carbon monoxide poisoning	125
Ventilation.	125
13. Pulmonary hypertension	127
Definition and background	127
Pathophysiology	127
Epidemiology	127
Presentation	127
Investigation.	127
Management	128
Prognosis	128
14. The upper respiratory tract	129
Disorders of the nose.	129
Disorders of the larynx	133
15. Sleep disorders	137
Sleep apnoea	137
Narcolepsy	139
16. Asthma	141
Definition and background	141
Prevalence.	141
Classification.	141
Precipitating factors	141
Pathogenesis	141
Inflammatory mediators	142
Early and late responses	142
Airway remodelling	143
Clinical features	143
Investigations	145
Treatment.	146
Acute asthma	147
Education	147

17. Chronic obstructive pulmonary disease (COPD)	149
Introduction	149
Epidemiology	149
Aetiology	149
Genetic risk factors.	149
Pathophysiology	150
Alveolar destruction (emphysema).	150
Clinical features	151
Complications	152
Investigation.	153
Management	153
18. Disorders of the interstitium	157
Introduction	157
Pulmonary fibrosis – overview.	157
The pneumoconioses.	159
Extrinsic allergic alveolitis	160
Idiopathic pulmonary fibrosis	160
Pulmonary eosinophilia	161
Bronchiolitis obliterans	161
Desquamative interstitial pneumonitis	162
Alveolar proteinosis	162
19. Malignant lung disease	163
Neoplastic disease of the lung.	163
Neoplasms of the pleura	167
20. Infectious lung disease.	169
Introduction	169
Pneumonia	169
Tuberculosis	171
Influenza	175
HIV-related lung disease	176
21. Suppurative lung disease.	179
Bronchiectasis	179
Cystic fibrosis	181
Lung transplantation	182
Lung abscess	183
22. Pleural effusions.	185
Introduction	185
Gross appearance	185
Clinical features	185
Investigations	185

Light's criteria	185	Vasculitis	190
Treatment	185	Respiratory manifestations of systemic rheumatological diseases	191
Empyema	187	Self-assessment	193
Haemothorax	187	Single best answer questions (SBAs)	195
Chylothorax	187	Extended matching questions (EMQs)	203
Chest drain insertion	187	SBA answers	209
23. Respiratory manifestations of systemic disease.	189	EMQ answers	213
Introduction	189	Glossary	217
Sarcoidosis.	189	Index	219
