Series editor foreword	v	Cardiac catheterization	32
Prefaces	vii	Cardiac computed tomography	33
1. History	1	5. Chest pain	35
Aim of history taking	1	Differential diagnosis of chest pain	35
Presenting complaint	1	History to focus on the differential diagnosis of chest pain	35
Systems review	5	Presenting complaint	35
Past medical history	6	Examination of patients who have chest pain	36
Family history	6	Investigation of patients who have chest pain	37
Social history	6	New onset central chest pain at rest in an ill patient	40
Drug history	7	6. Dyspnoea	43
Allergies	7	Differential diagnosis of dyspnoea	43
Presenting history findings	7	History to focus on the differential diagnosis of dyspnoea	43
2. Examination	9	Examination of dyspnoeic patients	43
How to begin the examination	9	Investigation of dyspnoeic patients	45
Observation	9	Dyspnoea at rest of recent onset in an ill patient	47
Examination of the hands	10	7. Syncope	49
Examination of the pulse	10	Differential diagnosis of syncope	49
Taking the blood pressure	11	History to focus on the differential diagnosis of syncope	49
Examination of the face	11	Examination of patients who present with syncope	50
Examination of the jugular venous pressure	11	Investigation of patients who present with syncope	51
Examination of the praecordium	12	Syncope of recent onset in an ill patient	53
Finishing off the examination	14	8. Palpitations	55
Presenting your findings	15	Differential diagnosis of palpitation	55
3. How to write a clerking	17	History to focus on the differential diagnosis of palpitation	55
Documentation of the history	17	Examination of patients who have palpitation	56
Documentation of the examination findings	18	Investigation of patients who have palpitation	57
At the end of the clerking	18	9. Peripheral oedema	63
Sample medical clerking	20	Differential diagnosis of oedema	63
4. Common investigations	23		
Electrocardiography	23		
Echocardiography	29		
Myocardial perfusion imaging	31		
Cardiac magnetic resonance	32		
Positron emission tomography	32		

History to focus on the differential diagnosis of peripheral oedema	63	Clinical features of acute myocardial infarction.	96
Examination of patients who have oedema	64	Investigation of acute myocardial infarction.	98
Investigation of patients who have oedema	66	Management of acute myocardial infarction.	100
Important aspects	67	Summary of management of ischaemic chest pain	102
10. Heart murmur	69	Heart block after myocardial infarction	102
Differential diagnosis of a heart murmur	69	Cardiogenic shock after myocardial infarction.	103
History to focus on the differential diagnosis of a heart murmur.	69	15. Supraventricular tachyarrhythmias	105
Examination of patients who have a heart murmur	70	Sinus tachycardia	105
Investigation of patients who have a heart murmur	73	Premature atrial complexes	105
11. High blood pressure	77	Nodal and junctional ectopics	106
Differential diagnosis	77	Atrial tachycardia	106
History to focus on the differential diagnosis of high blood pressure	77	Atrioventricular junctional tachycardia	107
Examination of patients who have high blood pressure	78	Atrioventricular nodal re-entry tachycardia	107
Investigation of patients who have high blood pressure	80	Wolff–Parkinson–White syndrome	108
Investigations to exclude secondary hypertension	81	Atrial flutter	109
12. Fever associated with a cardiac symptom or sign	83	Atrial fibrillation	110
Differential diagnosis	83	Investigation of patients who have supraventricular tachyarrhythmias	113
History to focus on the differential diagnosis of fever	83	Drugs used to treat tachyarrhythmias	114
Examination of patients who have a fever associated with a cardiac symptom or sign	84	16. Ventricular arrhythmias	117
Investigation of patients who have a fever associated with a cardiac symptom or sign	86	Ventricular ectopic beats	117
13. Angina pectoris	89	Definition of ventricular tachyarrhythmias	117
Definition of angina pectoris	89	Ventricular tachycardia	118
Pathophysiology of angina pectoris	89	Torsades de pointes	119
Risk factors for coronary artery disease	89	Ventricular fibrillation.	120
Clinical features of angina pectoris	89	Drugs used to treat ventricular tachycardia and fibrillation	121
Investigation of angina pectoris	90	Non-pharmacological treatments of ventricular tachyarrhythmias	121
Management of angina pectoris.	91	17. Cardiac arrest and resuscitation.	125
Unstable angina	94	Basic life support.	125
14. Acute myocardial infarction	95	Advanced life support	127
Definition of acute myocardial infarction.	95	18. Bradyarrhythmias	131
		Definition of bradyarrhythmias	131
		Sinus bradycardia	131
		Atrioventricular block.	132
		Bundle branch block	134
		Investigation of bradyarrhythmias	136
		Pacemakers	136

19. Heart failure	139	Clinical features of infective endocarditis	174
Definition of heart failure	139	Investigation of a patient who has infective endocarditis	176
Pathophysiology of heart failure	139	Management of infective endocarditis	177
Causes of cardiac failure	141	Complications of infective endocarditis	177
Clinical features of heart failure	142	Monitoring of patients who have infective endocarditis	178
Examination of patients who have heart failure	143		
Investigation of heart failure	144	24. Hypertension	179
Management of heart failure	145	Definition of hypertension	179
20. Cardiomyopathy	151	Causes of hypertension	179
Definition of cardiomyopathy	151	Clinical features of hypertension	179
Dilated cardiomyopathy	151	Investigation of a patient who has hypertension	180
Hypertrophic cardiomyopathy	152	Investigation of secondary hypertension	180
Restrictive cardiomyopathy	155	Management of hypertension	181
Arrhythmogenic right-ventricular cardiomyopathy	155	Phaeochromocytoma	183
Takotsubo cardiomyopathy	155	25. Congenital heart disease	185
21. Pericarditis and pericardial effusion	157	Definition of congenital heart disease	185
Acute pericarditis	157	Causes of congenital heart disease	185
Dressler syndrome	159	Complications of congenital heart disease	185
Constrictive pericarditis	159	Atrial septal defect	186
Pericardial effusion	159	Patent foramen ovale	188
22. Valve disease	161	Ventricular septal defect	188
Rheumatic fever	161	Patent ductus arteriosus	189
Mitral stenosis	162	Coarctation of the aorta	190
Mitral regurgitation	164	Other lesions in congenital heart disease	191
Aortic stenosis	166	Notes on pulmonary hypertension and Eisenmenger syndrome	192
Aortic regurgitation	168		
Assessing the severity of a valve lesion	169	Self-assessment	195
Tricuspid regurgitation	170	Best of fives (BOFs)	197
Other valve lesions	171	Extended-matching questions (EMQs)	205
Prosthetic heart valves	171	BOF answers	211
23. Infective endocarditis	173	EMQ answers	215
Definition of infective endocarditis	173	Glossary	221
Epidemiology of infective endocarditis	173	Index	223
Pathophysiology of infective endocarditis	173
