Preface	ix
Foreword by Sir Muir Gray	xi
Acknowledgments	xiii
<b>1 A brief history of medicine and statistics</b>	1
<b>2 What is evidence-based medicine?</b>	9
<b>3 Causation</b>	19
<b>4 The medical literature: an overview</b>	24
<b>5 Searching the medical literature</b> Sandi Pirozzo and Elizabeth Irish	33
<b>6 Study design and strength of evidence</b>	56
<b>7 Instruments and measurements: precision and validity</b>	67
<b>8 Sources of bias</b>	80
<b>9 Review of basic statistics</b>	93
<b>10 Hypothesis testing</b>	109
<b>11 Type I errors and number needed to treat</b>	120
<b>12 Negative studies and Type II errors</b>	130
<b>13 Risk assessment</b>	141
<b>14 Adjustment and multivariate analysis</b>	156
<b>15 Randomized clinical trials</b>	164
<b>16 Scientific integrity and the responsible conduct of research</b> John E. Kaplan	179

<b>17</b>	<b>Applicability and strength of evidence</b>	187
<b>18</b>	<b>Communicating evidence to patients</b> Laura J. Zakowski, Shobhina G. Chheda, Christine S. Seibert	199
<b>19</b>	<b>Critical appraisal of qualitative research studies</b> Steven R. Simon	208
<b>20</b>	<b>An overview of decision making in medicine</b>	215
<b>21</b>	<b>Sources of error in the clinical encounter</b>	233
<b>22</b>	<b>The use of diagnostic tests</b>	244
<b>23</b>	<b>Utility and characteristics of diagnostic tests: likelihood ratios, sensitivity, and specificity</b>	249
<b>24</b>	<b>Bayes' theorem, predictive values, post-test probabilities, and interval likelihood ratios</b>	261
<b>25</b>	<b>Comparing tests and using ROC curves</b>	276
<b>26</b>	<b>Incremental gain and the threshold approach to diagnostic testing</b>	282
<b>27</b>	<b>Sources of bias and critical appraisal of studies of diagnostic tests</b>	295
<b>28</b>	<b>Screening tests</b>	310
<b>29</b>	<b>Practice guidelines and clinical prediction rules</b>	320
<b>30</b>	<b>Decision analysis and quantifying patient values</b>	333
<b>31</b>	<b>Cost-effectiveness analysis</b>	350
<b>32</b>	<b>Survival analysis and studies of prognosis</b>	359
<b>33</b>	<b>Meta-analysis and systematic reviews</b>	367
	<b>Appendix 1 Levels of evidence and grades of recommendations</b>	378
	<b>Appendix 2 Overview of critical appraisal</b>	384
	<b>Appendix 3 Commonly used statistical tests</b>	387
	<b>Appendix 4 Formulas</b>	389
	<b>Appendix 5 Proof of Bayes' theorem</b>	392
	<b>Appendix 6 Using balance sheets to calculate thresholds</b>	394
	Glossary	396
	Bibliography	411
	Index	425
